

COVID-19

Protect yourself and those
dear to you !

Infections are spreading in ways like these:

- More than 15 friends & family gathered and had a barbecue
- More than 80 people gathered in church for choral singing and eating

COVID-19

If you're not careful,
this can happen:

- We had a party before having symptoms, so let's not tell the Health Center...
 - My friends had symptoms, but we were too slow to notice and the infection spread!
- Our friends and family are important, so let's have a party with them sometimes!
 - I got infected, and it spread to my elderly parents too!
- My family caught COVID, but I don't have symptoms so it's fine...
 - Actually I was infected, and I infected my coworkers too!

***If you or your family has any health issues,
please consult a hospital, health center or your company!***
